

Release Summary, ArrowBerry, 6.1.2026

Key User Stories + Acceptance Criteria:

1. Camera Scanner Page - As a shopper, I want to be able to take a picture of my receipt so that I don't have to type each ingredient I have into the app
 - a. User can open the camera scanner page
 - b. User can take a photo
 - c. Receipt image is processed by text extraction model
 - d. Extracted ingredients are displayed for review
 - e. User can confirm extracted ingredients before adding them to pantry
 - f. Successfully confirmed ingredients are added to the database
2. Digital Pantry Page - As a user, I want the app to have a digital pantry to store all the ingredients I have and allow me to edit the items
 - a. User can view all pantry items
 - b. Pantry items display name and quantity
 - c. User can edit pantry item information
 - d. User can delete pantry items
 - e. Changes persists after closing and reopening the application
3. Digital Pantry Features - As a user, I want to be able to manually add an item to the pantry
 - a. User can manually enter an ingredients name
 - b. User can specify quantity and unit
 - c. Ingredients persist after application restart
4. User Authentication/ Session Management - As a user, I want my data associated with my account so that my pantry and preferences are saved
 - a. User can create an account
 - b. User can log in and log out
 - c. Session persists between app launches
 - d. User only sees their own pantry and recipe data
 - e. Unauthorized users cannot access protected data
5. Recipe Search Features - As a person who likes variety, I want to choose what cuisine I am feeling.
 - a. User can select a cuisine filter
 - b. Multiple Cuisine options are available
 - c. Selecting the buttons again will unselect and revert the recommendations
6. Shopping List - As a user, I want a digital shopping list so that I can remember what to buy when I am not at home
 - a. Missing ingredients are displayed and button "add missing ingredients to shopping cart" is created
 - b. User can add all missing ingredients with one action

- c. Added ingredients appear in the shopping list
 - d. Duplicate ingredients are handled appropriately
- 7. Recipe Recommendation - As a user, I want recipes recommended to me based on my pantry contents so that I only see what I am able to make
 - a. Pantry ingredients are analyzed
 - b. Recipes are ranked by ingredient match percentage
 - c. Matching ingredients are displayed
 - d. Missing ingredients are displayed
 - e. Recommendations update when pantry contents change

Known Issues:

- Expo Go dev is only configured to work for IOS and Web not android
- Review System only works on web application, not mobile version
 - The mobile version does not show the text interface while the web application shows text and star rating UI.
- Text extraction works well, however, is not perfect and occasionally makes errors
- Sometimes when editing an item extracted from the receipt image, the item card will stay swiped to the side and not be able to return to its original position
- Sometimes, depending on the length of the recipe name, the close button is pushed off the modal
- Changing your email address to an invalid email address will cause an error, but still send users an email that their email was changed, even when it is not actually changed to the invalid address. To my understanding Supabase sends the user an email if the changeEmail function is called even if the function returns an error.
- Change email and password only works on the IOS version of expo, not the web hosted version

Product Backlog:

1. As a user I want to be able to more easily select the expiration date of an item I manually add, so that I can add more ingredients in a shorter time frame
 - a. Create feature where user can select on a calendar the expiration date
2. As a user I want the features to be intuitive so that I don't spend time trying to figure out how to use them
 - a. Swipeable features (item cards) should label that the user can swipe them to edit or delete the item
