

Sprint #3 Report- ArrowBerry

Actions to stop doing: The team should stop merging their own PRs. The team should stop opening PRs on code that doesn't have associated unit tests (we do not have CodeCov installed, but we should be aiming for 60-70% coverage).

Actions to start doing: The team should create unit tests for features that they are implementing. The team should consistently add new tests that go along with any features they are adding to the project. The team should notify the group if tasks are being switched around between members.

Actions to keep doing: The team should keep consistently updating the rest of the team on their progress through their tasks. The team should continue to notify the team about issues affecting their ability to get their work done. The team should keep meeting after class every day and briefly discuss what they are working on and their next steps.

Work Completed:

1. Recipe Review that allows users to submit review and also view the number of reviews as well as star rating for each recipe: 6 points
 - a. As a user, I want the app to ask me whether I liked or didn't like the dishes I made so that it can recommend things similar to what I already enjoy.
2. Shopping List (able to add, delete or edit ingredients that are missing from the recipe pantry) : 5 points
 - a. As a user, I want to have a digital shopping list so that I can easily remember what I need to get at the store
3. Recipe Recommendation Algorithm based on Expiry date: 5 Points
 - a. As a forgetful person, I want the app to recommend to me what will go bad soon, so that I can prioritize eating that.
4. Allergen Filtering: 4 points
 - a. As a user with allergies
 - b. I want to have the option/filter to avoid recipes that might be allergic to me.
5. Camera Upgrades: 5 points
 - a. As an active user, I want the camera page to be prettier and easier to use so that I can more easily take pictures of my receipts and have the text extracted

Update: We realized that the Health Summary user story is a feature that is strayed too far from what the original app idea is and it is also a time consuming feature. We instead focused our energy on Allergen filtering.

Work Completion Rate:

Total Story points - 25/25

Total number of estimated work hours:, $15 + 13 + 12 + 15 = 55$

Total number of days in sprint: 14

Days per user story: 3.5

Work hours per day: 4 hours per day

Work hours per member per day: 1 hour per day
