

Sprint 4 Plan - ArrowBerry

5/18/2026 - 6/01/2026

Goal: Fine tune smaller features and finalize making the app look pretty and optimal for user use. Manage merging final parts

[user story 1] Notifications - As a busy person I would like useful notifications so that I can have reminders about food related things, like food going bad

[task 1] Create notifications system that informs you when your food is about to go bad in 2 days when you open the app

[task 2] Create notification when opening app when food has gone bad as reminder to throw the items away or estimate how much longer you think it could go (option to click buttons 1,2,3,4,5+ days)

[task 3] Create notification that your food will go bad in 1 day push notification on screen

Total Time $1 + 1 + 2 = 4$ story points

[user story 2] User Interface - As a user, I want the UI to be upgraded so that the app looks and feels like a professional, completed project.

[task 1] try to implement UI UX in parts to mimic Nick's figma design he already made

[task 2] Unify whole app to keep uniform UIUX

Total Time $4 + 1 = 5$ story points

[user story 3] Edit Pantry: As a person with little free time, I would like a way to scan my receipts to add to the digital pantry so that I don't have to take a lot of time inputting each ingredient individually

[task 1] Add edit feature so that instead of deleting one item at a time you can multi-select many items at once and delete them at the same time

Total Time 2 story points

[user story 4] View Recipes - As a user, I want to be able to see a list of all recipes I could make with my current ingredients, so that I can try out new meals and spend more time cooking and less time planning to cook.

[task 1] When viewing a recipe add a link to the original point of reference so that if the user wants a deeper review they can do that.

Total Time 2 story points

Total = $4+5+2+2 = 13$

· **Team roles:**

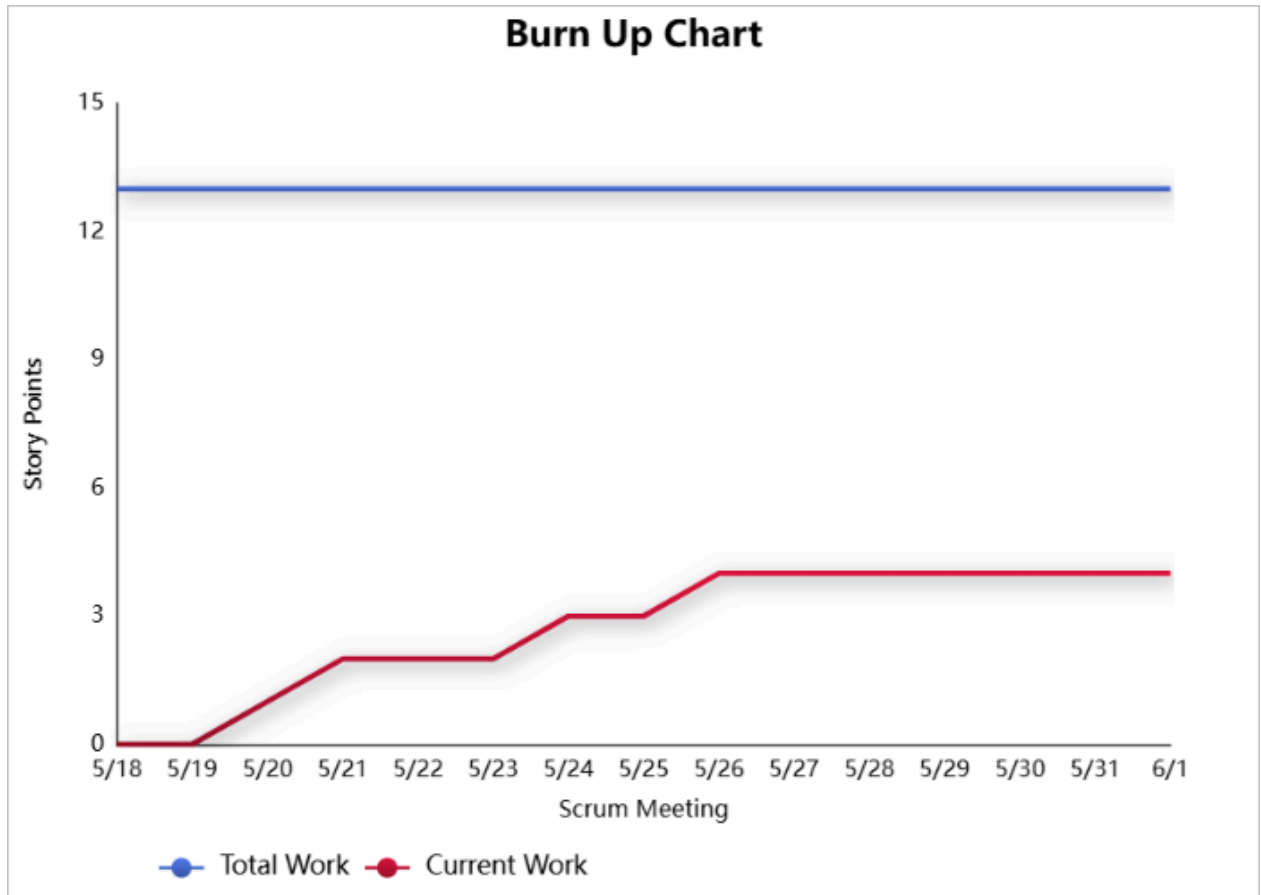

- Servesch: Product Owner + SCRUM Master
- David: Team Member
- Nikhil: Team Member
- Akhilesh: Team Member

Initial task assignment:

- Servesch: Finish camera scanner beautification. Merge others' code. Work on sprint report, plan and prep final document
- David Research and implement OCR. Link website url to recipes page
- Nick: implement priority for expiration date into algorithm
- Akhilesh: clean up and finish recipes page UI/UX and implement review/rating system

· **Initial burnup chart: A graph giving the initial burnup chart for this sprint and is labeled as such with sprint number and project name and is located in the lab.**

USER STORY	TO DO	WORKING	DONE
Notifications	- notification to adjust date of expiration or remove item		-Notification when food going bad in 2 days
User Interface	implement UI UX in parts to mimic Nick's figma		
Edit Pantry	Edit multiple pantry items		
View Recipes			-link to original recipe

· **Scrum times:**

- Monday 9:05am-9:20am
- Wednesday 9:05am-9:20am
- Friday 9:05am-9:20am
