

Sprint 2 Plan - ArrowBerry rev. 1

4/20/2026 - 5/3/2026

Goal: Finish implementation of all the features that are core to our system, meaning that we will have an MVP following the completion of this sprint.

Task listing, organized by user story: This section lists the user stories, in priority order from most important (top) to least important (bottom). Within each user story, there needs to be a list of tasks required to implement the user story, along with the time estimate for each task (preferably less than or equal to 6 ideal hours). This should look like:

[user story 1] As a forgetful person, I would like a 'digital pantry' page where all the ingredients I have can be visualized, so that I can be aware of what I have while I am not in my kitchen/pantry

Story Points: 6 points

[task 1] Read a user's ingredients from the database

[task 2] Put those ingredients into a user-friendly visualization

[task 3] Create buttons to edit, add, or delete entries

[user story 2] As a person who likes eating variety, I would like a well-populated and diverse selection of recipes to choose from, so that I don't have to repeat recipes [4]

[task 1] Create a web scraper to grab recipes off of various sites

[task 2] Optimize so we only scrape necessary parts of the page (ingredients, instructions)

[Task 3] Normalize all the data into a way we can easily work with (CSV/JSON format)

[Task 4] Write the recipes to the database

[user story 3] As a user, I want to be able to refine my recommendations so that I can make a recipe more catered towards me. [3]

[Task 1] Create search bar feature in discover page

[Task 2] Create buttons for specific types of food (Mexican, Italian, Chinese, etc)

[user story 4] As a user, I would like to save my favorite recipes to my profile so that I can

quickly access them at any time [6]

[Task 1] Add save to profile button on recipe modal

[Task 2] Add saved recipes section to profile page

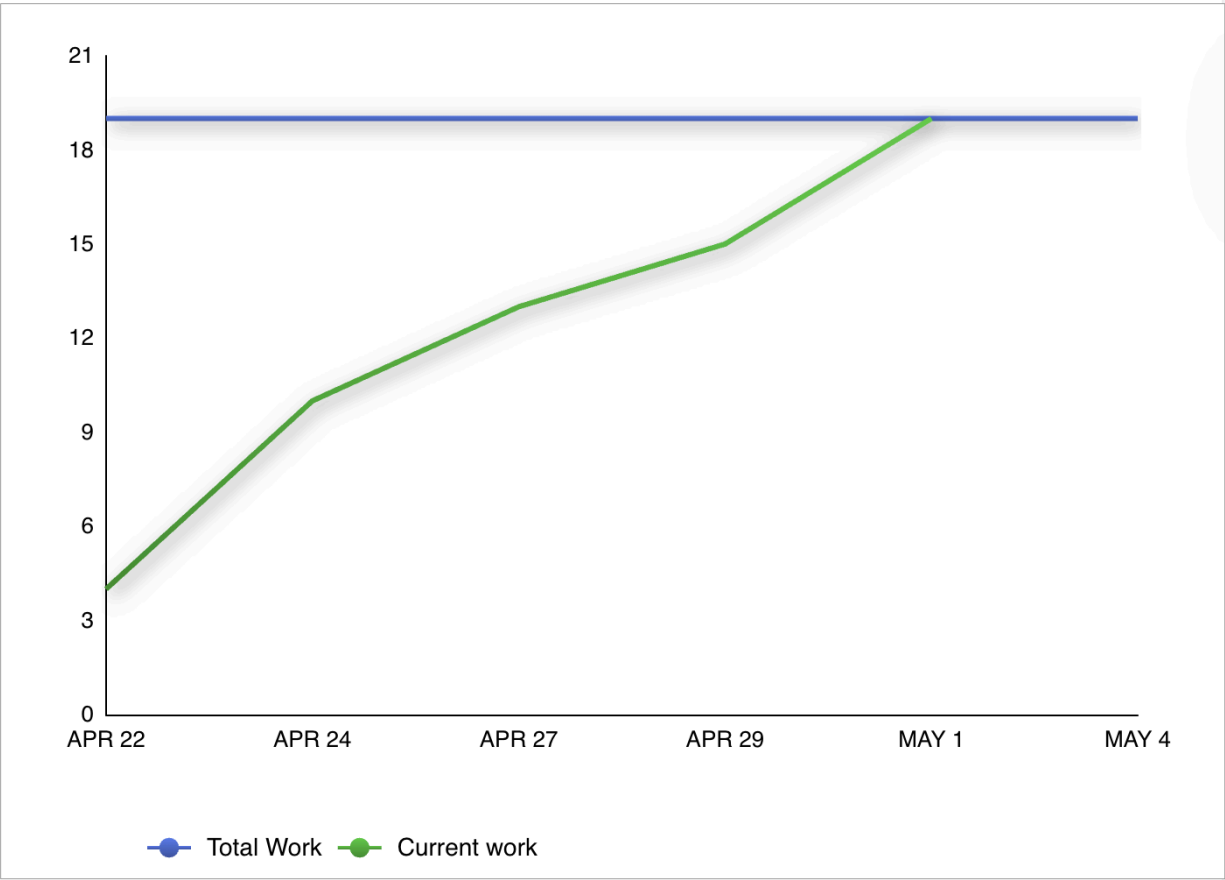

[Task 3] Implement feature so that saved recipes are clickable buttons that redirect you to the original recipe

[Task 4] Create the saved recipes database, and reference the UUID of the user who wants to save that recipe

- Servesesh: Product Owner
- Nikhil: SCRUM Master
- David: Team Member
- Akhilesh: Team Member

Initial task assignment:

- Servesesh: Digital Pantry features: manual add, edit, delete buttons, swipeable cards, saving ingredients to the database, etc
 - David: Recipe data collection: build a scraper, normalize the data, and write to the DB. Implement ingredient list and image onto recipe modal.
 - Akhilesh: Save recipes to profile feature, redirect to recipe modal, add/delete recipe buttons
 - Nikhil: Create search bar and tags for browsing recipes
- **Initial burnup chart: A graph giving the initial burnup chart for this sprint and is labeled as such with sprint number and project name and is located in the lab.**

USER STORY	TO DO	WORKING	DONE
Digital Pantry			- Read a users ingredients from db - Put ingredients into a user friendly vizualization - Create buttons to edit, add, or delete
Populate			- Create web scraper to

Databa se			grab recipes off internet - Normalize the data into a standard format - Write Recipes to the db
Recipe Search Feature s			- Create cultural filter buttons like (italian and mexican)
Save recipes to profile feature s			- Create profile page - Create section on profile page for saved recipes - Add save recipe to profile button on recipe modals

· **Scrum times:**

- Monday 9:05am-9:20am
- Wednesday 9:05am-9:20am
- Friday 9:05am-9:20am
